

FINCOCOR 35A

Anticorrosion protective agent for moulds

FIELDS OF APPLICATION

FINCOCOR 35A is a protective agent for the treatment of metal moulds. It is used to prevent oxidation of moulds during storage during periods of non-use. It is supplied in 500 ml spray cans for easy and immediate use.

ADVANTAGES

FINCOCOR 35A provides the following advantages:

1. Protects moulds from oxidation for a long time.
2. It forms a dry protective layer without greasy residues that attract dirt and soil and make handling the moulds uncomfortable due to high slipperiness.
6. It is compatible with release agents used for moulding, so it is sufficient to clean the mould before re-use without removing the protective layer of FINCOCOR 35A.

MODE OF APPLICATION

1. Clean the mould with FINCLEASE ORANGE by removing oily residues of sandblasting or grinding oils and silicone release agent residues;
2. Apply 1 even coat of FINCOCOR 35A spraying from different directions to completely cover the inside and outside surface of the mould;
3. Wait 5-10 minutes and repeat the operation;
4. Allow to rest overnight, then place the mould in storage.

PACKAGE

Cardboard boxes containing 12 canisters of 500 ml/each.
